

If you had unlimited resources and no accountability

THE CHOICES WOULD BE EASY.

IF ONLY THAT WAS THE WAY IT IS.

Unfortunately, we live in a real world with real demands and the decisions have to be analyzed and weighed based upon a long list of considerations. Reporting, flexibility, growth, service guarantees, value vs. costs, feasibility, accountability, changing technologies, future trends, documentation, compatibility, maintenance, problems – wow the list can seem endless.

When evaluating the adequacy of your current system and how it will meet your future needs, we take many factors into account.

- Who is sharing what data - where is it located?
- Is it data processing or intensive graphic files?
- What is the traffic like- is it steady or bursting - are you overloading the network, do you have room for expansion or more demands on the network?
- Who talks to whom?
- What are the protocols for various transmissions... are there bridging concerns?
- Does data need to transfer immediately or can it be batched and sent off hours?
- What tolerance is there for latency?
- What are your network reporting needs?

Are your people waiting for the computer to catch up to them - what's the impact on productivity? How to strike the right balance between speed - accuracy - cost and productivity. Where do the real values lie with the right network?

WHAT OPPORTUNITIES ARE OUT THERE, HOW ARE THEY BEST COMBINED, HOW DO YOU MEASURE THE CHOICES AND MAKE THE RIGHT DECISIONS? This process can be worry-free when you engage the TMC consultants to assist you in evaluating, developing and procuring the best solutions for your network so you can focus on your company's productivity.

Technology Management performs current audits, accurately assessing what balance of networks is correct for your company. We take numerous variables into account, including looking ahead to anticipate changes and needs. Then TMC determines the most compatible network for your company and negotiates the best solution with both national and local vendors. We customize systems which will enhance both your company's efficiency and savings.

When the network goes down or is too slow - your company's ability to perform is jeopardized.

If your head is spinning or we've peaked your interest it's time to enlist the network design and engineering services of TMC.

Contact us at Technology Management to evaluate and implement the right network setup which will make the most out of your communications.
